EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with David K. Sakata (Reg. No. 59,949) on November 2009.

3. The application has been amended as follows:

In the Claims: Claims 9 and 25 have been amended.

9. (Currently Amended) A computer-readable medium storing computer-executable instructions for providing a virtual connectivity subscribe-notify service with virtual connectivity to perform a method on a computing device comprising:

 sending a subscribe message to the virtual connectivity subscribe-notify service subscribing to at least one network attachment point change event published by a remote peer, the at least one network attachment point change event comprising a change in a network address of the remote peer;

 receiving a notify message from the virtual connectivity subscribe-notify service notifying of a network attachment point change event published by a remote peer; and

synchronizing a previous network address entry associated to a previous network attachment point of the remote peer in a locally stored local connection translation table with a corresponding current network address entry associated to a current network attachment point of the remote peer,

wherein an application layer continuously refers to the current network attachment point by referring to the previous network attachment point regardless of the number of network attachment point changes, and a lower protocol layer refers to the current network attachment point, and,

wherein the application layer is unaware of attachment point changes.

25. (Currently Amended) A computing device for providing a virtual connectivity subscribe-notify service with virtual connectivity comprising:

a processor; and

memory coupled to the processor, the memory comprising computer-program instructions executable by the processor for:

sending a subscribe message to the virtual connectivity subscribe-notify service subscribing to at least one network attachment point change event published by a remote peer, the at least one network attachment point change event comprising a change in a network address of the remote peer;

receiving a notify message from the virtual connectivity subscribe-notify service notifying of a network attachment point change event published by a remote peer; and synchronizing a previous network address entry associated to a previous network attachment point of the remote peer in a locally stored local connection translation table with a corresponding current network address entry associated to a current network attachment point of the remote peer,

wherein an application layer refers to the current network attachment point by continually referring to the previous network attachment point regardless of the number of network attachment point changes, and a lower protocol layer refers to the current network attachment point, and,

wherein the application layer is unaware of attachment point changes.

REASONS FOR ALLOWANCE

4. The following is an Examiner's Statement of Reasons for Allowance:

Claims 1, 3-11, 13-16, and 25-31 are allowable over the prior art of record.

The examiner has found that the prior art of record does not teach or suggest or render obvious method and computer program for providing a subscribe-notify service with virtual connectivity comprising: synchronizing a previous network address entry associated to a previous network attachment point of the remote peer in a locally stored local connection translation table with a corresponding current network address entry associated to a current network attachment point of the remote peer in response to a

Art Unit: 2455

network attachment point change event published by the remote peer; and an application layer refers to the current network attachment point by continually referring to the previous network attachment point regardless of the number of network attachment point changes, a lower protocol layer refers to the current network attachment point, and the application layer is unaware of attachment point changes as set forth in the independent claims 1, 9, and 25.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance OR Examiner's Amendment."
